

Big Data meets Big Data

Wie die Integration von Big-Data-Lösungen über Unternehmensgrenzen gelingt

Torsten Lenhart
Fraunhofer IESE

Architekturen 2016
Hildesheim, 23.06.2016

The Fraunhofer-Gesellschaft at a Glance

The Fraunhofer-Gesellschaft undertakes applied research of direct utility to private and public enterprise and of wide benefit to society.

24,000 staff

67 institutes and research units

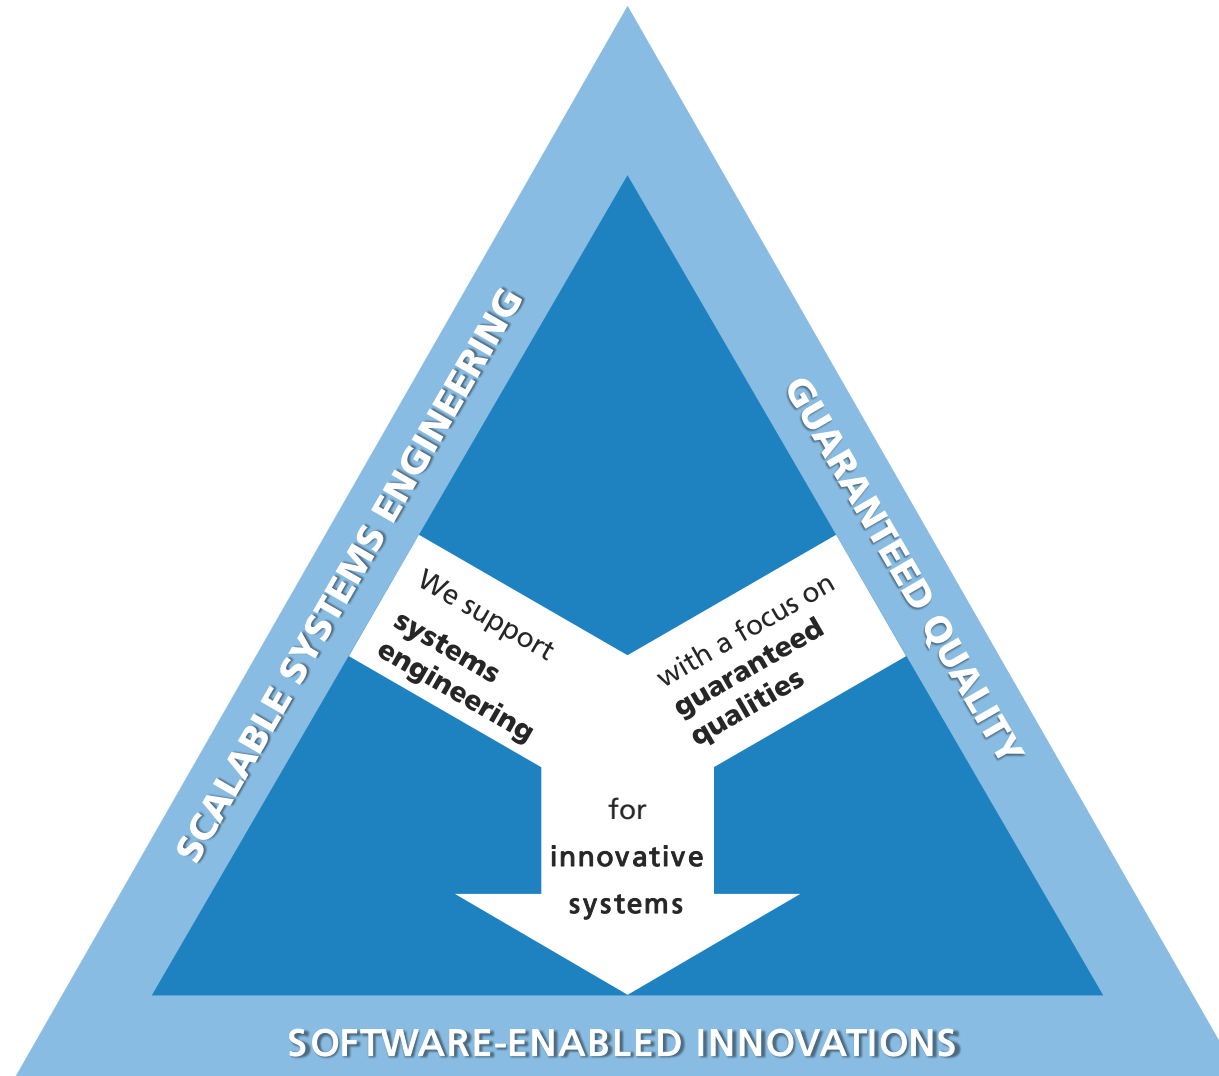

Fraunhofer IESE

The institute for software and systems engineering methods

- Founded in 1996, headquartered in Kaiserslautern
- Over 155 full-time equivalents (FTEs)
- Our solutions can be scaled flexibly and are suitable for companies of any size
- Our most important business areas:
 - Automotive and Transportation Systems
 - Automation and Plant Engineering
 - Health Care
 - Information Systems
 - Energy Management
 - E-Government

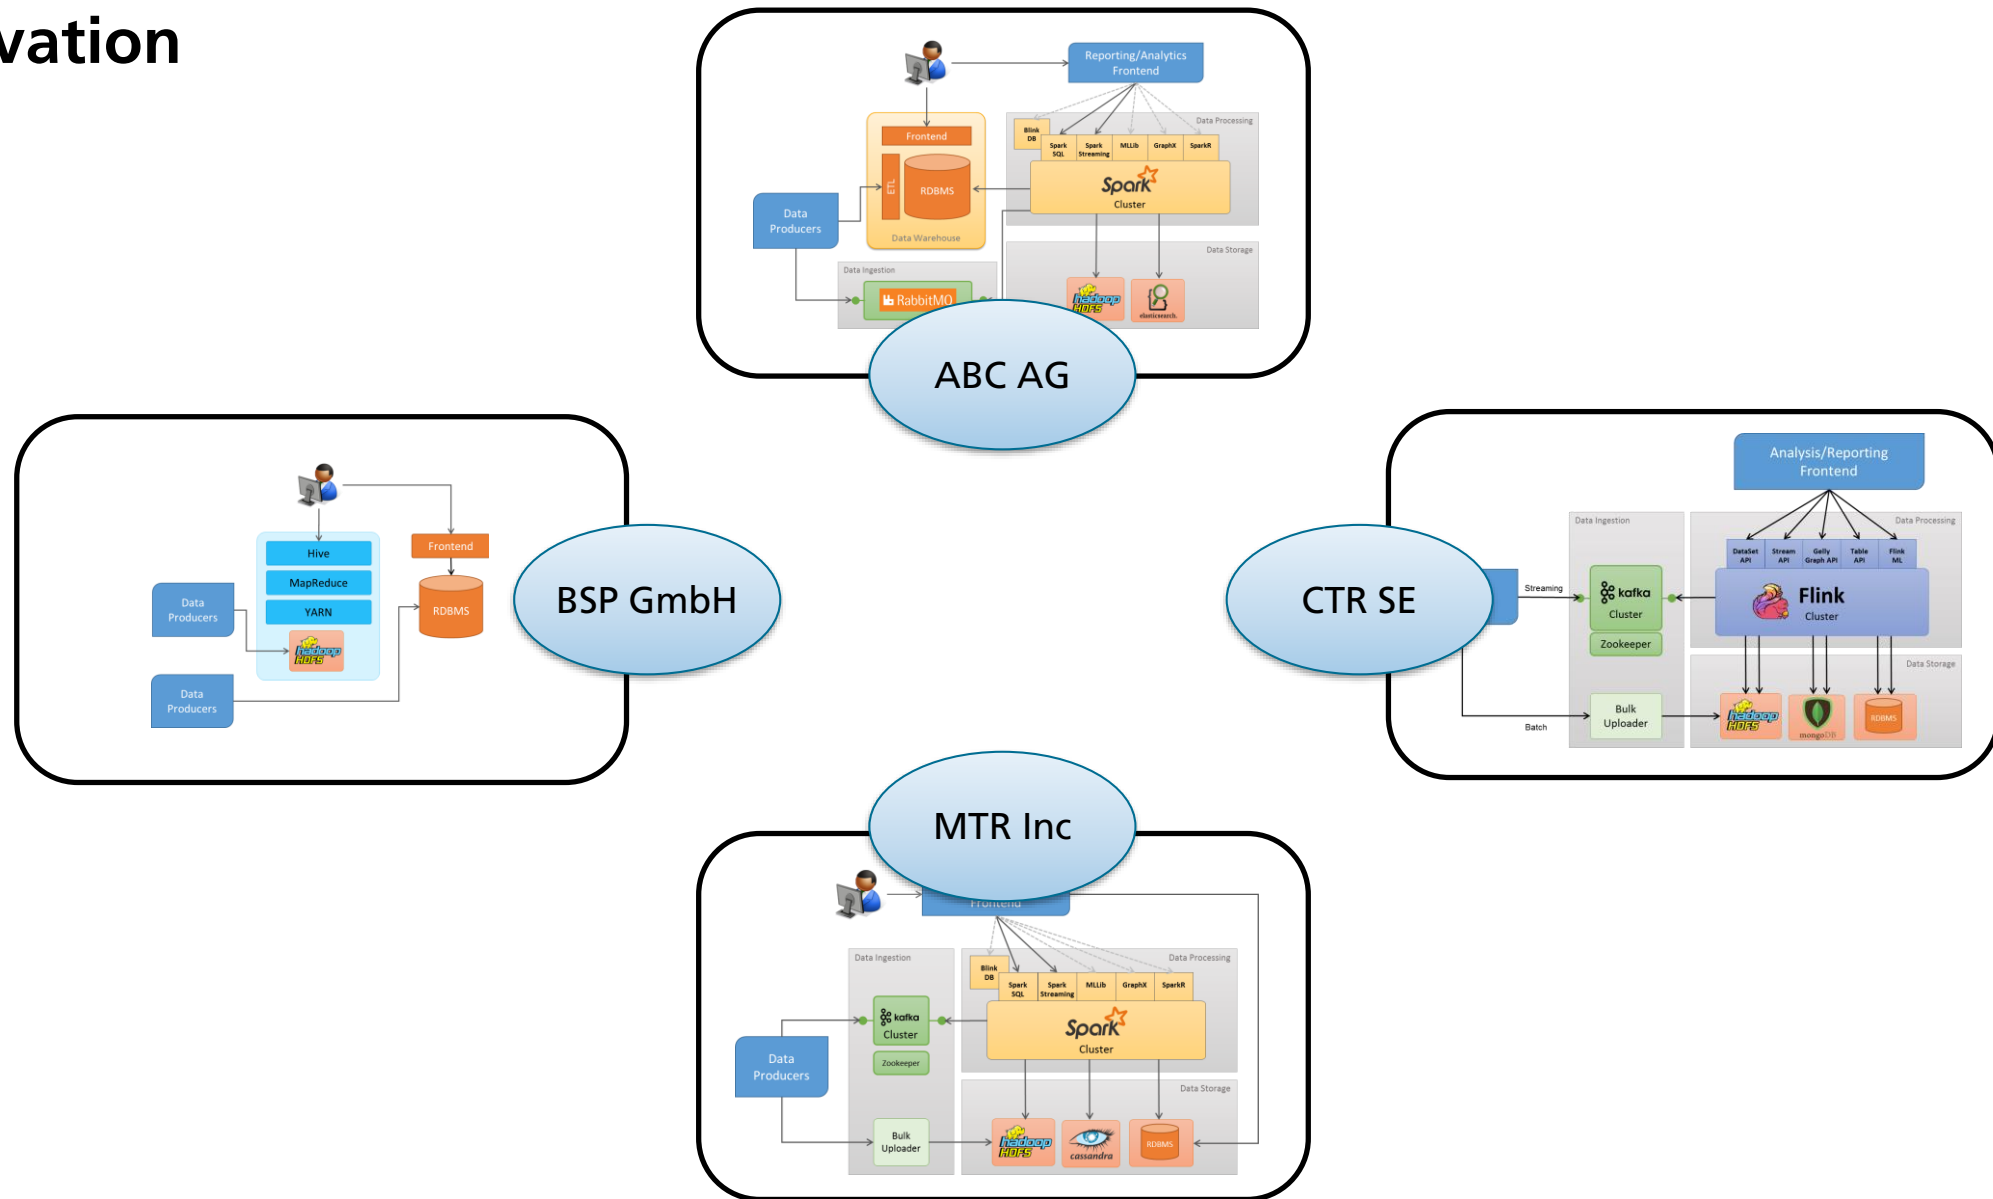

Our Competencies – for Your Benefit

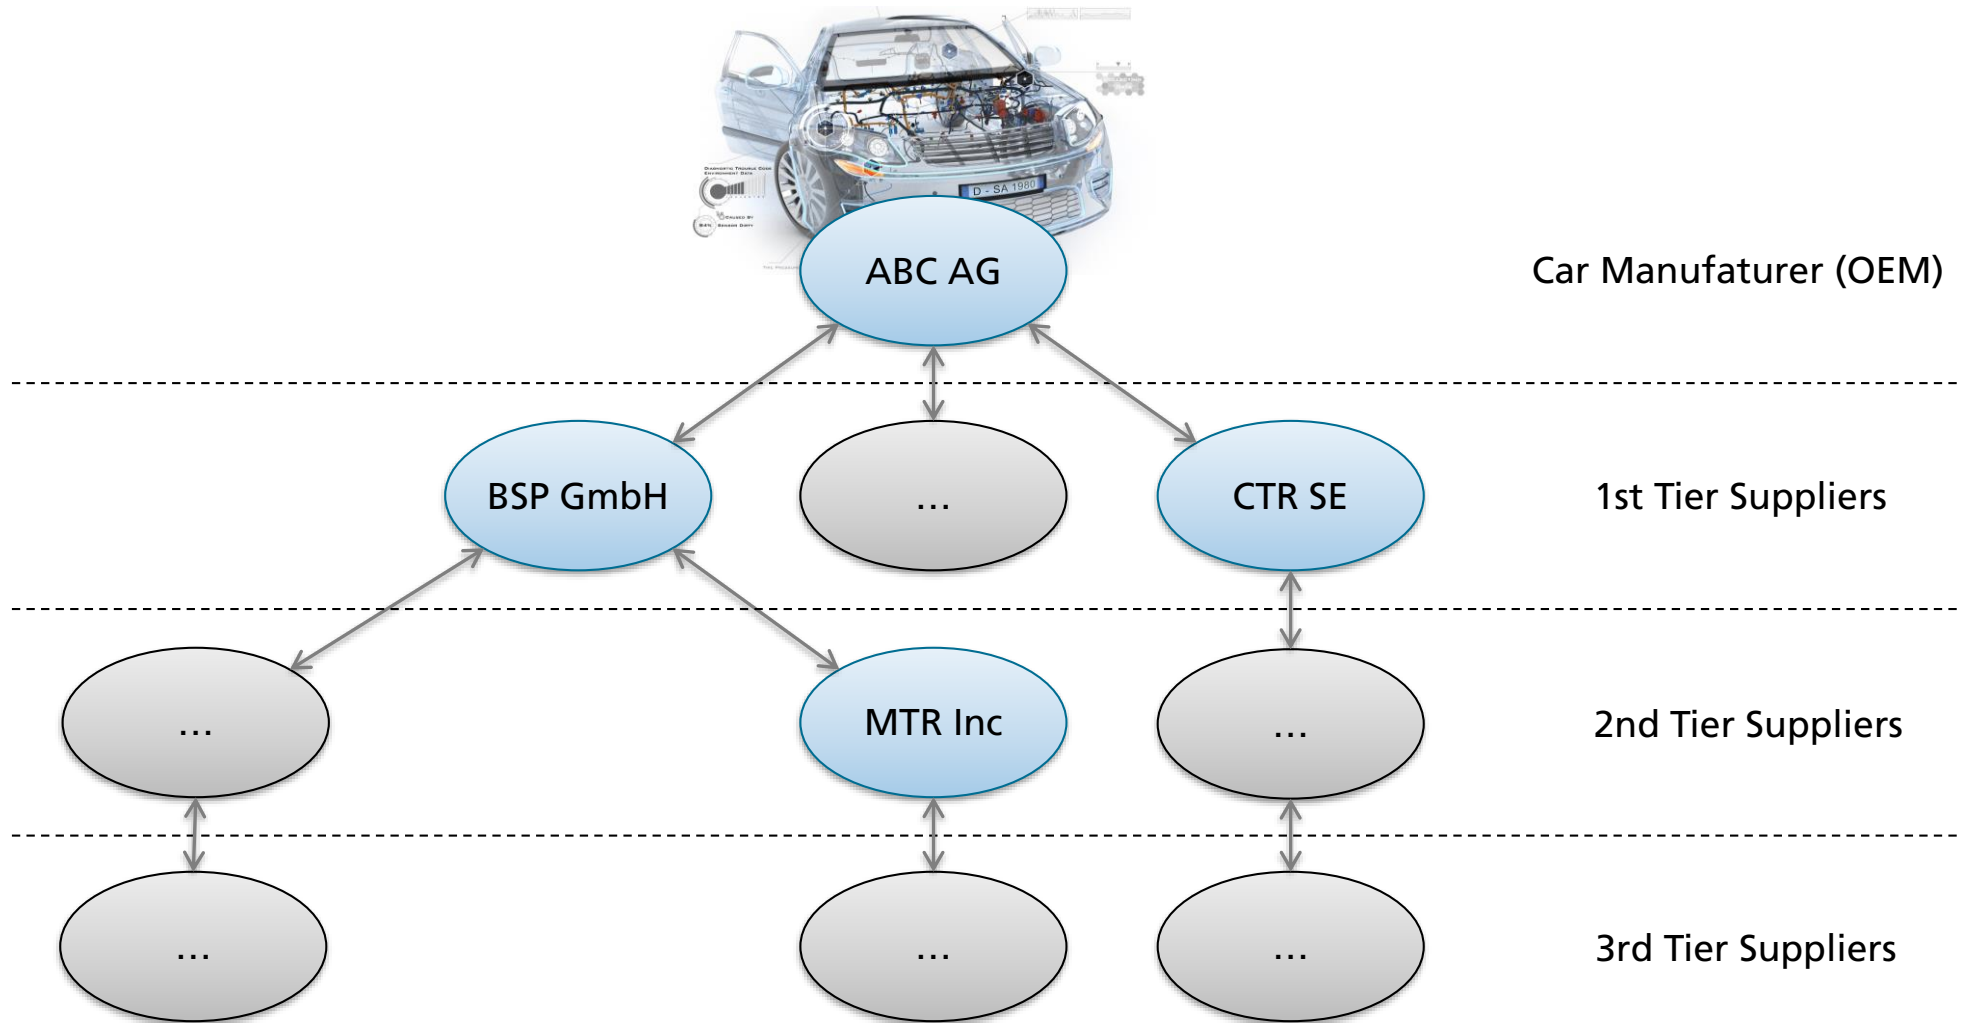

Our Competencies – for Your Benefit

Motivation

Motivation

The research project PRO-OPT

PRO-OPT aims at identifying valuable data and making it available for creating additional benefit for all members of a Smart Ecosystem.

Gefördert durch:

aufgrund eines Beschlusses des Deutschen Bundestages

Project Lead, Technology and Evaluation Partner for Automotive Diagnostics

Technical Project Lead, Research Partner for Access Restriction, SW Architecture & Data Quality

Technology and Evaluation Partner for Production Systems

Audi

Evaluation Partner and Data Supplier for Automotive Diagnostics

Research Partner for Data Mining and Integration of System Components

Partners

Data Supplier and Evaluation Partner

Multiplicator

Visualization

Project Duration: 01.01.2015 - 31.12.2017

Main Challenge 1: Build a Technology Bridge

A photograph of the Golden Gate Bridge in San Francisco, California, taken during sunset. The bridge's iconic red-orange towers and suspension cables are silhouetted against a warm, orange and yellow sky. The bridge spans across the water, with hills visible in the background. The overall mood is serene and contemplative.

How can we bridge the **isolated data islands** of the partners in the ecosystem so that **analysis can be performed across these islands** while the **original owner of the data keeps control** of it?

Main Challenge 2: Data Usage Control

- Data is the DNA of a company
 - There are common, but also conflicting interests in the ecosystem
 - Data access is often perceived as a binary decision
- Fine granular access policies with additional control and protection mechanisms are a key success factor

Main Challenge 3: Substantiation of Benefits

- High-Level: Everyone agrees
- Concrete use cases are sometimes difficult to define
- But they are needed to justify investments & compromises

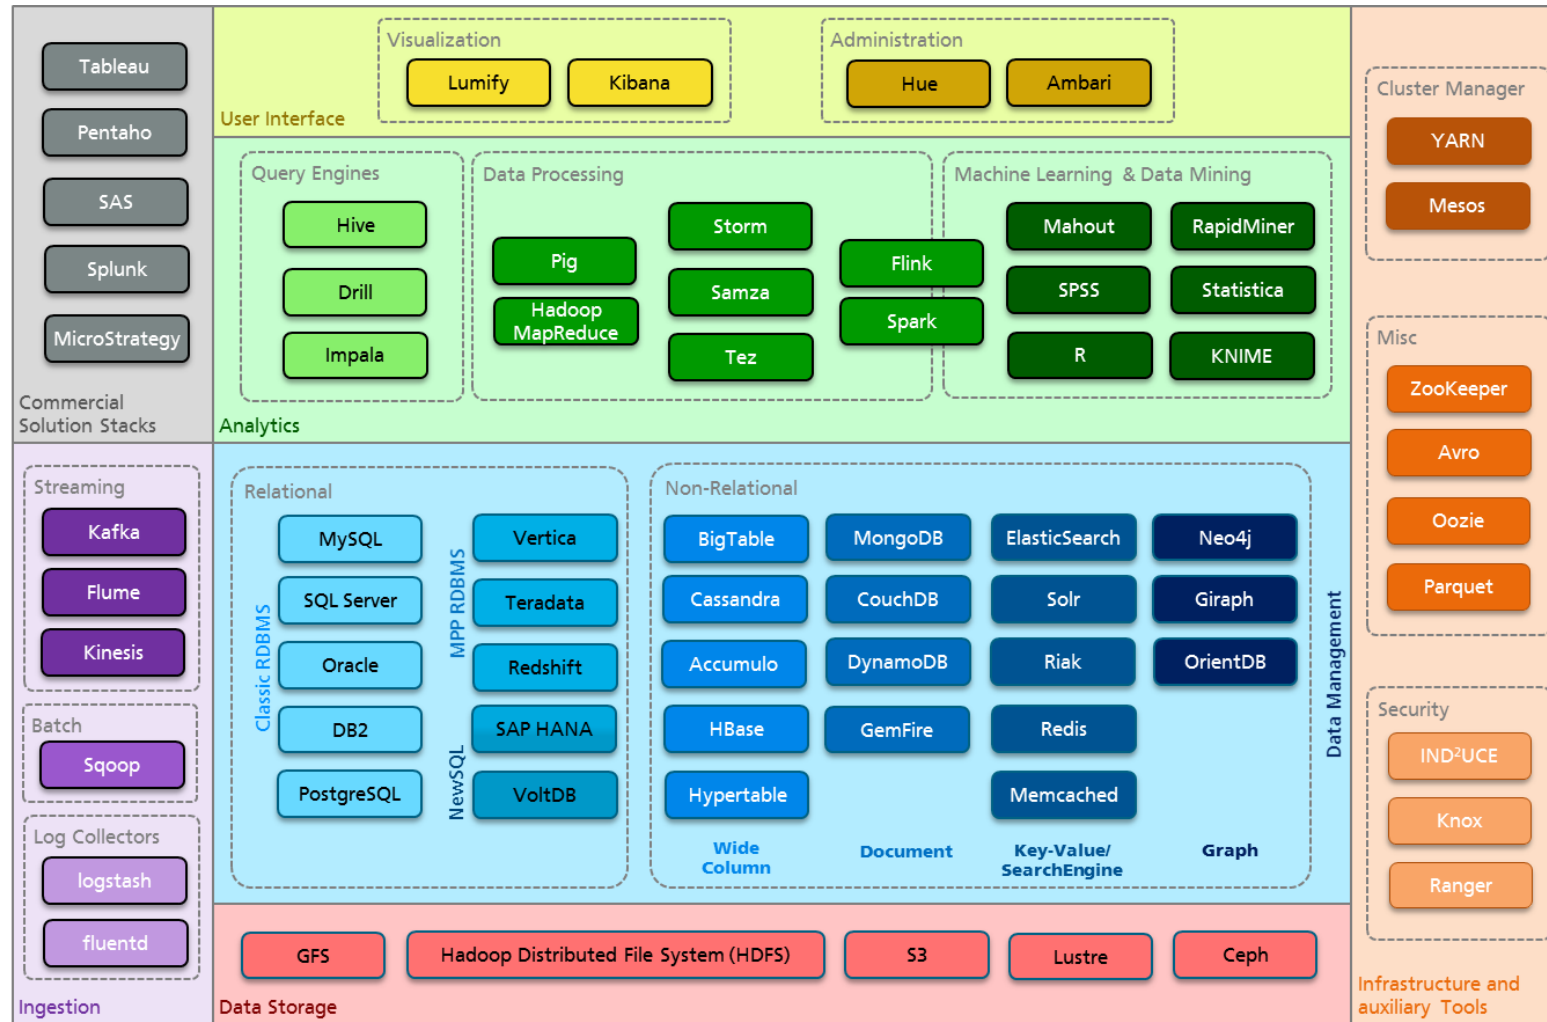

- A research project is well suited to resolve this deadlock

An aerial photograph of a mountainous region, likely the Alps, showing a dense network of valleys and ridges. The terrain is rugged and covered in green vegetation. A semi-transparent white rectangular box is overlaid in the center of the image, containing the text "Step 0: Gathering an holistic overview".

Step 0: Gathering an holistic overview

PRO-OPT Big Data Landscape

**Step 1:
Identifying potential pillars
for the technology brigade**

Observation

- Rise of multi-purpose data processing engines:

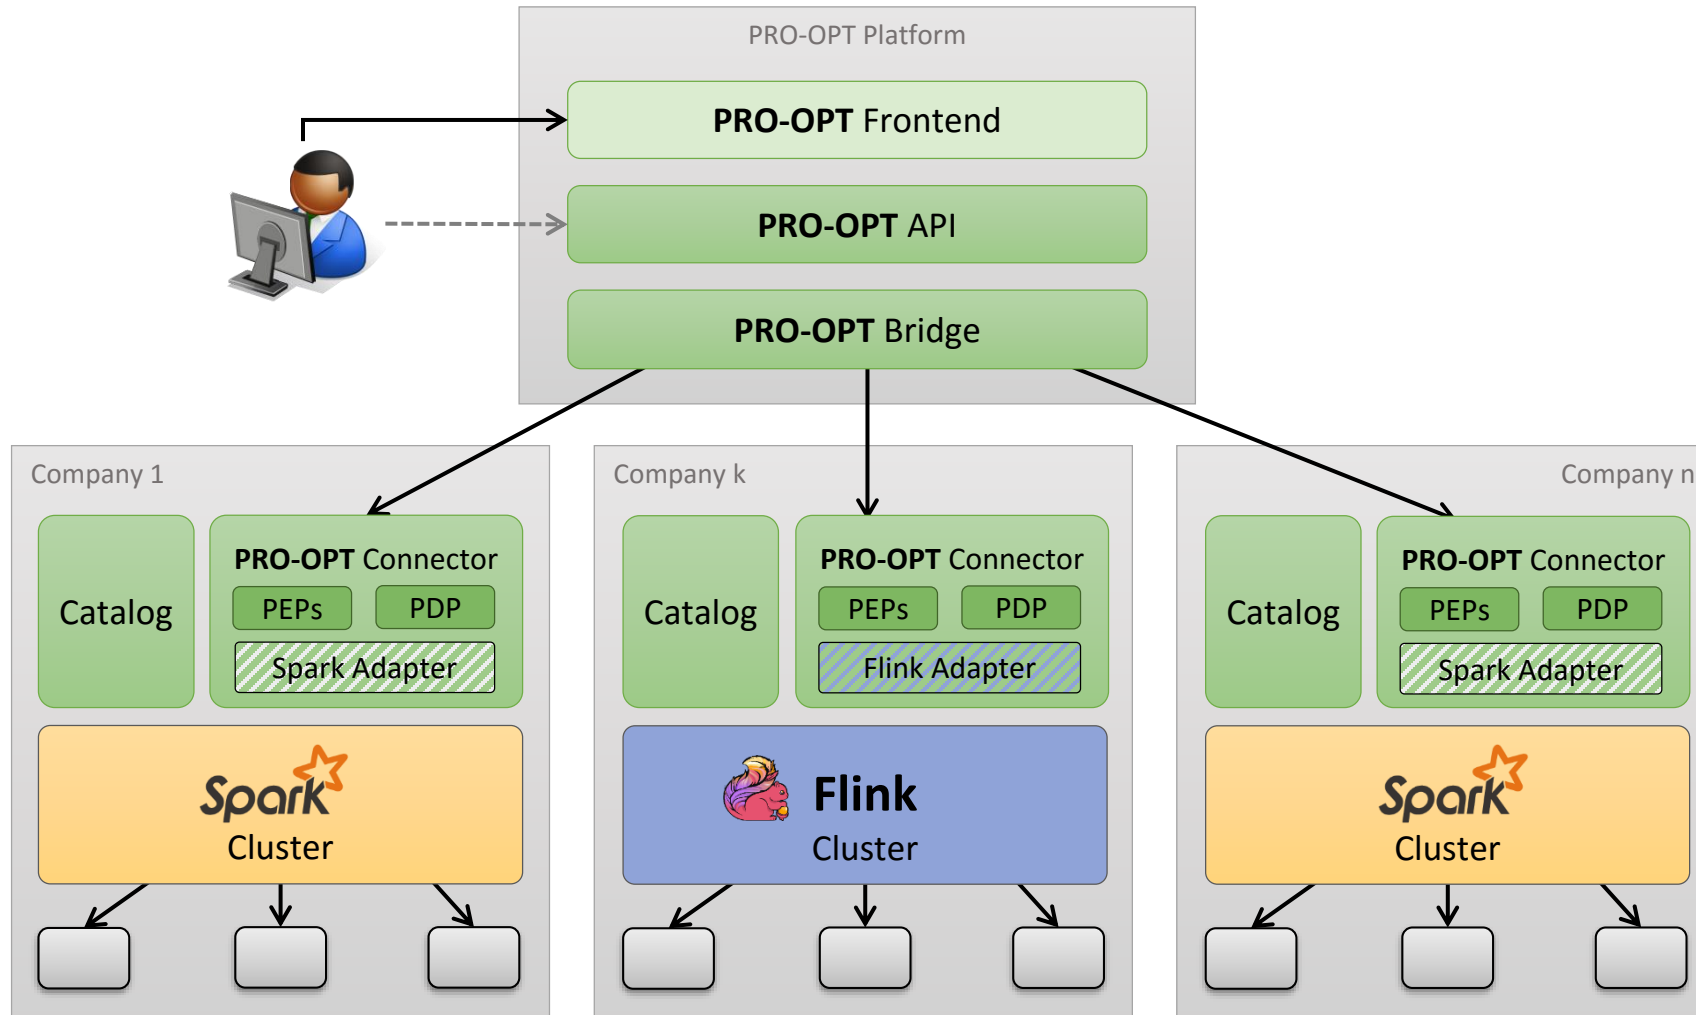

Spark vs Flink – High-Level Comparison

	 Flink	 Spark
Origin	TU Berlin	University of California, Berkeley
Execution Model	Directed Acyclic Graphs (DAGs)	Directed Acyclic Graphs (DAGs)
Streaming Support	Native	Micro-Batches
Latest Stable Release	1.0.3 (11.05.2016)	1.6.1 (09.03.2016)
Spreading	●●●	●●●●●●●
Contributors	~ 200	~ 900
Sprachen	Scala, Java	Scala, Python, (Java)
Project Homepage	http://flink.apache.org	http://spark.apache.org
Backing Company	http://data-artisans.com	https://databricks.com

A detailed architectural floor plan is shown, featuring various rooms and corridors. A wooden ruler is placed diagonally across the plan, highlighting the 'Step 2' text. The plan includes labels for 'I.S. OFFICE 176', 'LOBBY 201', 'CORRIDOR 103', 'CORRIDOR 126', 'CONFERENCE 127', 'VIDEO CONTROL 125', 'WOMEN 127', 'EXIST. WOMEN 127', 'EXISTING MECHANICAL 120', 'MEN 128', 'I.S. OFFICE 175', 'STORAGE/RECYCLING 179', 'COATS/VENDI', 'EXST. MEN 122', 'I.S. WORK AREA 200', 'DISTANCE LEARNIN 124', 'UR', 'A3.1', and '4'. Dimensions such as '14'-8"', '12'-6"', '19'-7"', '9'-4"', '2'-0"', '5'-8"', '11'-5"', '8'-11"', '13'-7"', and '14'-9"' are visible. The ruler shows measurements in inches and centimeters.

**Step 2:
Defining the overall architecture**

High-Level PRO-OPT Platform Architecture

PRO-OPT Components

PRO-OPT Frontend

- UI for general analysis and reporting features
- Also used for catalog and platform management

PRO-OPT API

- Interface for defining PRO-OPT programs
- Inspired by the Spark and Flink API – but detailed structure is work in progress

PRO-OPT Bridge

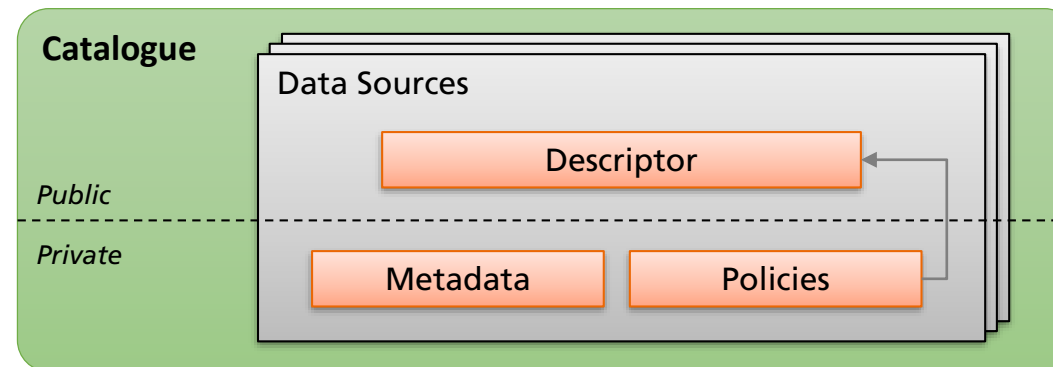

- Acts as some kind of pre-compiler and dispatcher
- Conveys the PRO-OPT programs into one or multiple Spark and/or Flink programs
- Passes the Spark and/or Flink programs together with the identity of the originator to the respective PRO-OPT connectors
- Collects the results from the connectors and applies some additional processing to generate the final result

PRO-OPT Components

Catalogue

- Contains a list & description of all data sources of this ecosystem member
- Private: Policy for each data source with fine granular usage rules:
 - Who is allowed to use the data?
 - How often can it be used?
 - Wich parts can be used?
 - What parts can be actually returned?
 - Do additional measures have to be applied (e.g. pseudonymisation)?
 - ...

PRO-OPT Components

PRO-OPT Connector

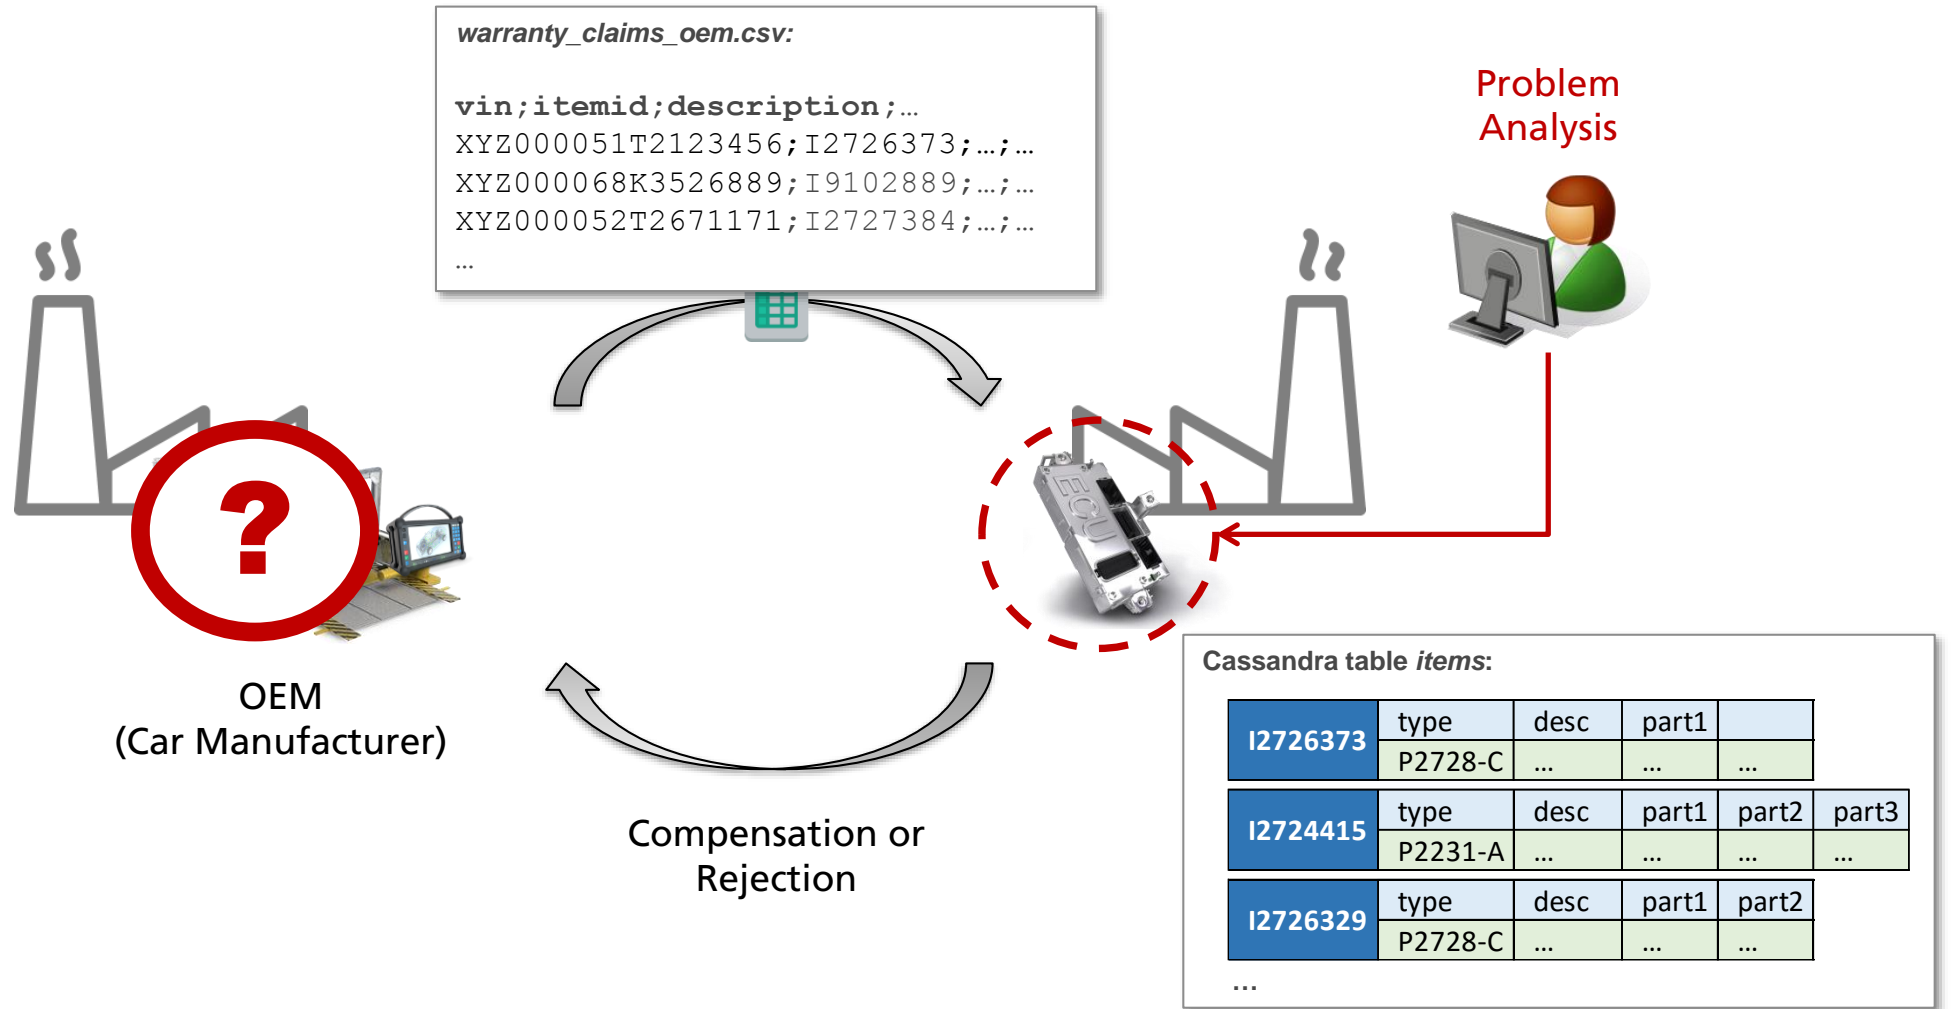

- Receives Spark and/or Flink programs (dependent on the cluster that is installed at this particular ecosystem member)
- Performs a pre-processing step (e.g. replacing data source ids with actual addresses)
- Enforces the data usage control rules defined through the respective policies by applying Policy Enforcement Points (PEP) and Policy Decision Points (PDP)
- Data usage control is based on the Fraunhofer IESE IND²UCE Framework

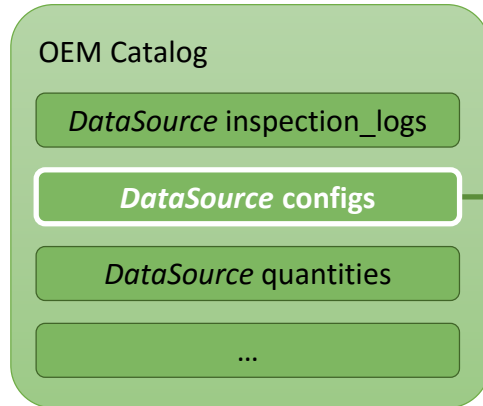

Integrated Distributed Data Usage Control Enforcement

Sample Scenario: Warranty Claim Process

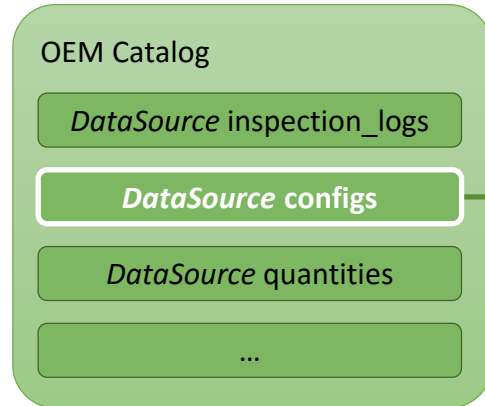

OEM Catalog

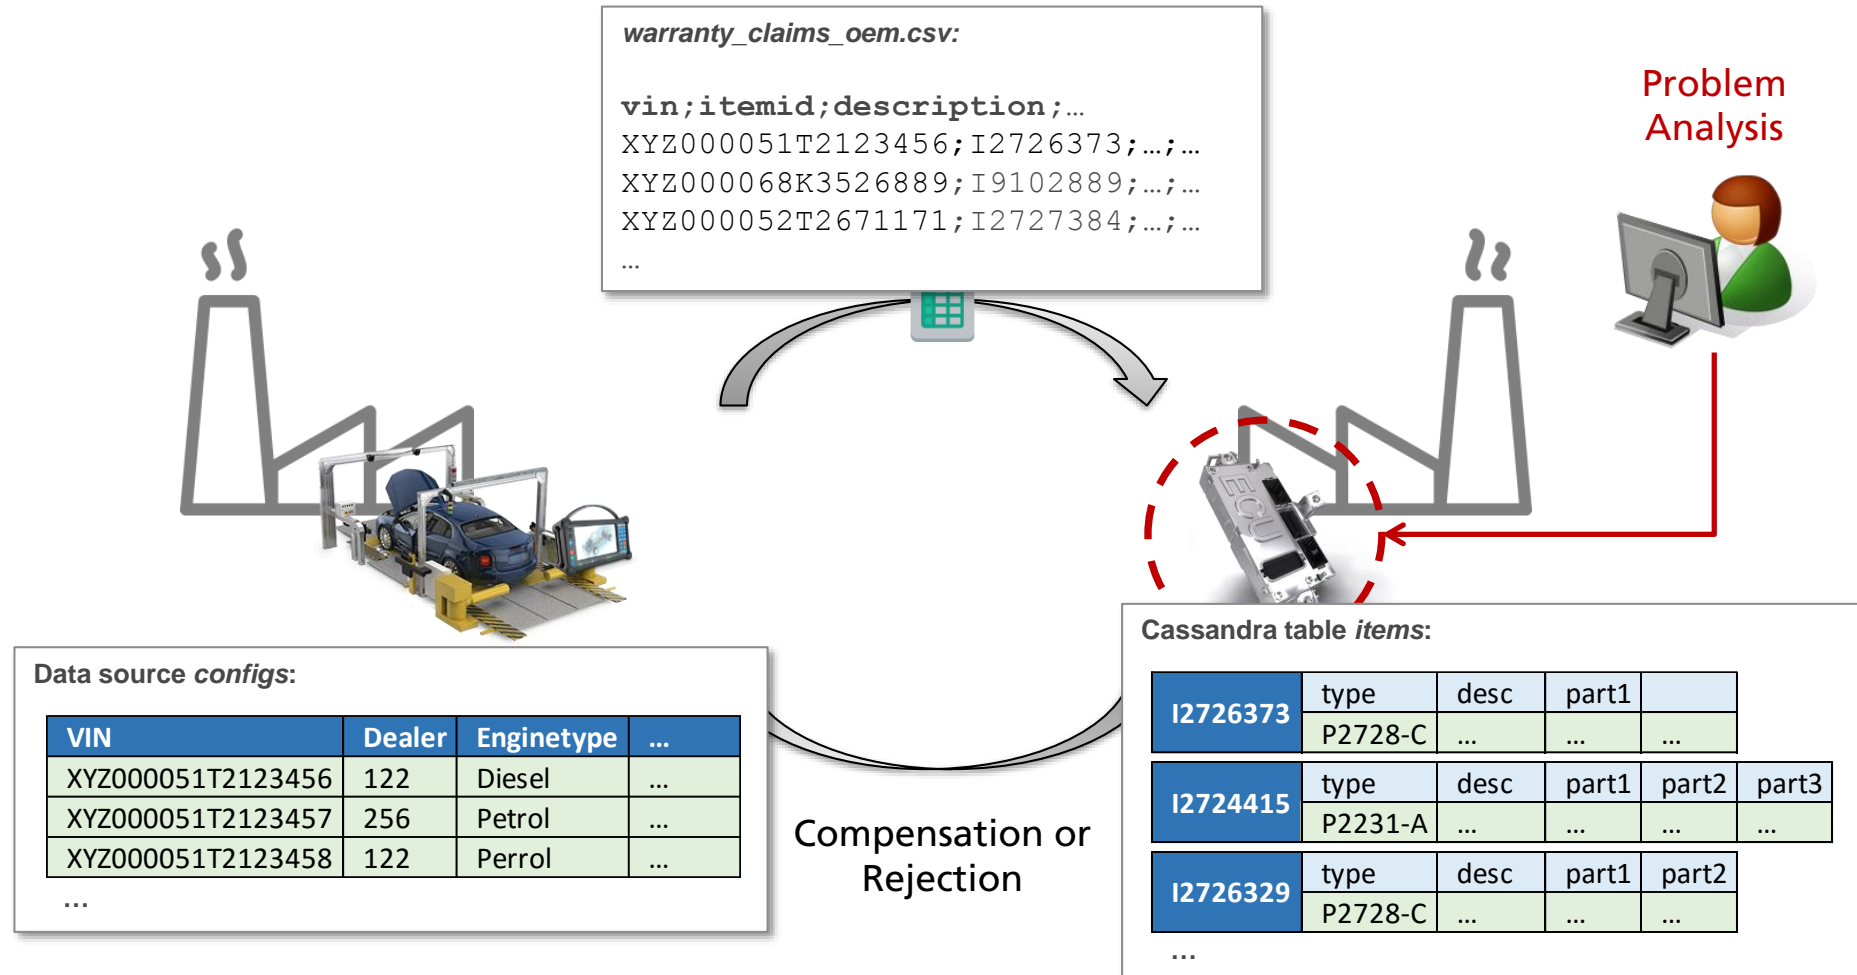

```
{
  "id": 126,
  "name": "configs",
  "description": "Information on car orders",
  "type": "structured",
  "columns": {
    "vin": {
      "description": "Vehicle Identification Number",
      "type": "String"
    },
    "dealer": {
      "description": "Id of the dealer",
      "type": "integer"
    },
    "enginetype": {
      "description": "Type of the engine (diesel, petrol, etc)",
      "type": "String"
    },
    [... ]
  },
  "restrictions": { [... ] }
}
```

OEM Catalog

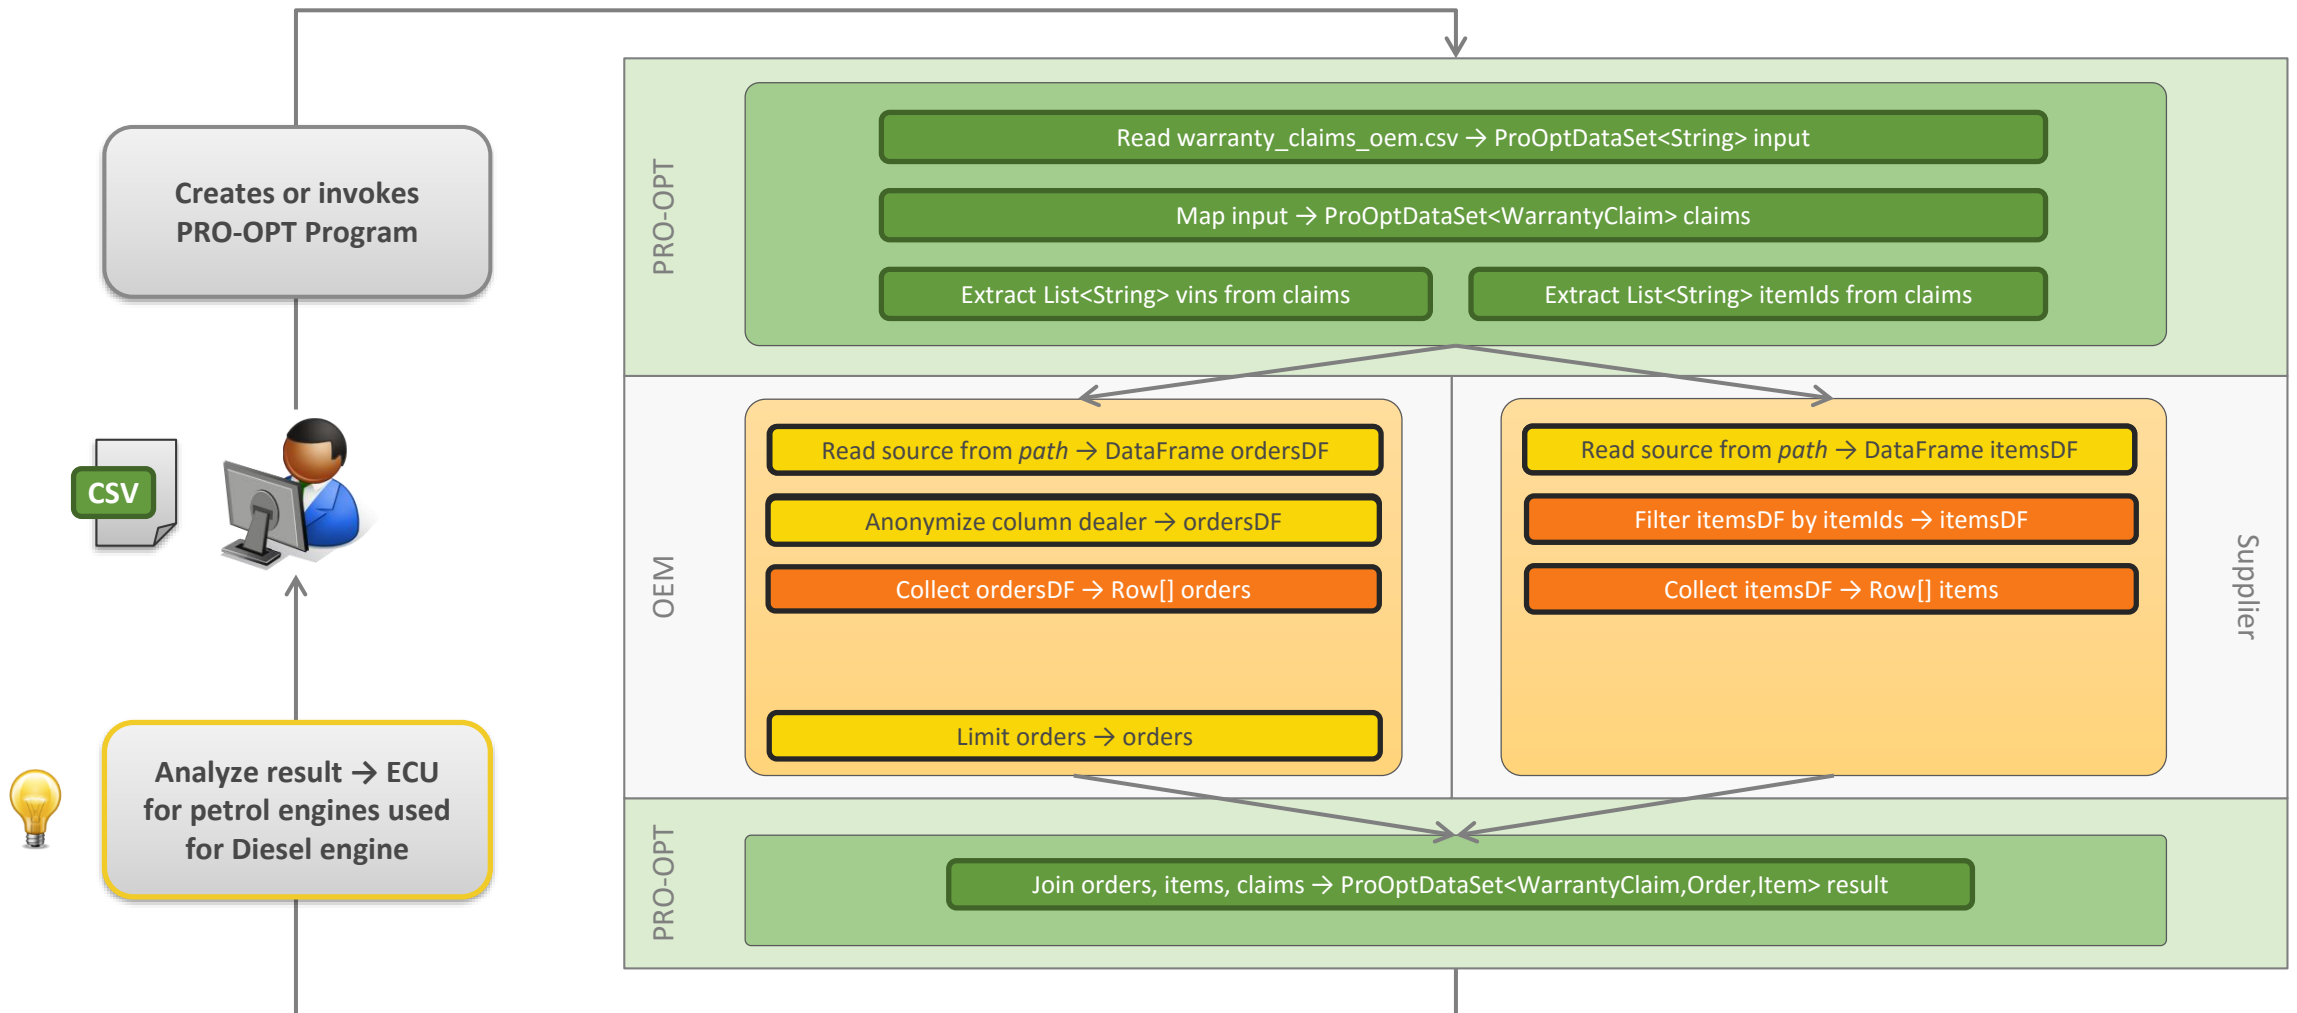

```
{
  "id": 126,
  [...]
  "restrictions": {
    "limitrows": {
      "max": 100
    },
    "frequency": {
      "maxperday": 1,
      "maxpermonth": 10
    },
    "pseudonymize": {
      "column": "dealer"
    }
  }
}
```

Sample Scenario: Warranty Claim Process

Sample Program

Status & Outlook

- Implementation
 - UI, API & Bridge (ongoing)
 - Connector (ongoing)
 - Spark Adaptor (ongoing)
 - Flink Adaptor (starts soon)
- Extension of Catalog & Policy Language
- Other Topics:
 - Data Quality
 - Crowd Sourcing
 - ...
- Not in scope for now: privacy issues
